EDUCATION

University of California San Diego — **La Jolla, CA**
Bachelor of Science in Data Science, Minor in Finance — Expected December 2026

University of California Berkeley Extension — **Berkeley, CA**
Certificate in Data Analytics (Data Analytics Bootcamp) — November 2023

EXPERIENCE

Triton AI Autonomous Racing, UC San Diego — **San Diego, CA**
DSC Programmer — January 2026 – Present

- Applied DevOps practices to containerize the ROS 2 go-kart stack on NVIDIA Jetson with Docker, bringing it live for track tests.
- Configured ROS 2 launch workflows for sensor and control nodes, making stack bring-up repeatable across track sessions.
- Debugged sensor and control-node faults, cutting pre-race downtime; placed 2nd of 9 at the 2026 Autonomous Karting Series.

IDX Exchange (Real Estate Data Science Platform) — **Remote**
Data Scientist Intern — September 2025 – December 2025

- Engineered a client-facing home-price ML pipeline on 90K California MLS sales across 57 counties via Cotality's Trestle API, tuning XGBoost, Random Forest, and Linear Regression models to R^2=0.90 and 12% MAPE on held-out sales.
- Translated model outputs into executive decision briefs for non-technical stakeholders, shaping client pricing strategy.
- Standardized a stage-gated validation workflow (EDA → tuning → evaluation) across 5+ experiments, cutting turnaround 40%.

Delta Rising Foundation (AI Climate Tools & Carbon Sequestration) — **Remote**
Data Science Volunteer / Research Assistant — August 2025 – December 2025

- Cleaned and validated environmental datasets in Python (pandas, NumPy) for an AI forest carbon MRV platform.
- Ran EDA on vegetation, satellite-derived, and ecological data, surfacing patterns for carbon prediction research.
- Tested data pipelines and ran quality checks in GitHub team workflows, documenting findings for reproducible research.

GAF (Roofing Materials Distributor, Supply Chain Operations) — **Jakarta, Indonesia**
Data Scientist Intern — January 2024 – September 2024

- Reframed a vague "reduce stock-outs" ask into a forecasting problem; built ARIMA and Decision Tree models, lifting accuracy 15%.
- Partnered with purchasing teams to turn forecasts into reorder decisions, cutting stock-outs 20%.
- Automated ETL pipelines into Tableau dashboards for 8+ inventory KPIs, ending manual reporting errors and saving 3 hrs/week.

STAL Corporation (Printing Supplier for Hospitals and Clinics) — **Jakarta, Indonesia**
Accounting & Data Analyst Intern — June 2023 – August 2023

- Cut procurement costs 15% by analyzing purchase-order trends to uncover hidden over-ordering patterns.
- Turned findings into a corrective purchasing policy for finance and operations across 8+ suppliers of hospital forms and calendars.
- Automated Excel/VBA expense-tracking and budget-planning workflows, recovering 4 hrs/week of manual reconciliation time.

PROJECTS & LEADERSHIP

Menu Engineering Bot | *Python, Streamlit, Claude API* | menu-engineering-bot.streamlit.app

- Built and deployed a Streamlit pricing app on 149K+ POS transactions that cleans messy exports (mixed delimiters, encodings, refunds) and runs a leakage-safe price-elasticity backtest (MAE, RMSE, WAPE).
- Integrated the Claude API to write decision memos from precomputed metrics with numerical-claim checks; 319 automated tests.

SD University Submarkets | *Python, pandas, Excel* | github.com/stephaniepatriciaans/SD-university-submarkets-analysis

- Captained a 5-person team and built the Python REIT-style model ranking 3 San Diego university housing submarkets.

Loan Charge Offs | *Python, scikit-learn, TensorFlow* | github.com/stephaniepatriciaans/Project-Loan-Charge-Offs

- Modeled credit-card charge-off risk on 30+ years of FRED data, comparing 4 ML methods; neural net hit 94.9% accuracy (RF 93.91%).

Urban Transit & Crime | *Python, GeoPandas, PySAL* | github.com/stephaniepatriciaans/Urban-Transit-and-Crime

- Merged 1M+ records from 4 public datasets into spatial regression models, finding transit-crime clusters in Chicago/NYC.

TrueFork | *Python, scikit-learn, JavaScript* | github.com/stephaniepatriciaans/TrueFork

- Built an NLP sentiment pipeline on 80K+ Food.com reviews, validated via A/B testing ($p<0.05$), and shipped it as a live public site.

SKILLS

AI / LLM: GenAI, Claude API, Prompt Engineering, Agentic Pipelines, RAG, Tool Use / Function Calling, Multi-step LLM Workflows
Programming: Python, R, SQL, NoSQL (MongoDB), JavaScript, Java, HTML, JSON, XML, MATLAB, C++
ML / Data: scikit-learn, TensorFlow, PyTorch, pandas, NumPy, SciPy, GeoPandas, PySAL, Matplotlib, Seaborn, Spark
Methods: Statistical Analysis, Hypothesis Testing, NLP, Predictive Modeling, Time-Series Forecasting, Backtesting, A/B Testing, Feature Engineering, ETL, Data Modeling, Data Validation, Automated Testing, Code Review, Data Visualization, Dashboards, KPI Reporting
Business & Finance: Hypothesis-Driven Problem Solving, Stakeholder Management, Executive Communication, Team Leadership, Business Strategy, Business Transformation, Risk Management, Real Estate Investment Analysis, Cost Reduction, Budgeting & Forecasting
Tools: Tableau, Power BI, Excel (Pivot Tables, XLOOKUP, VBA), Streamlit, Jupyter, Git, Jira, Linux, Docker, DevOps, ROS 2, AWS, REST APIs
Languages: English, Indonesian (both fluent)
