Stephanie Patricia Anshell

sanshell@ucsd.edu | (925) 348-7120 | linkedin.com/in/stephaniepatriciaanshell | github.com/stephaniepatriciaans |
stephaniepatriciaans.github.io/portfolio

Data Science student at UC San Diego with a Finance minor and experience applying machine learning, analytics, automation, and business analysis across real estate, supply chain, and financial operations. Built end-to-end data pipelines, predictive models, dashboards, and AI-powered tools that translate complex problems into measurable business outcomes. Proficient in Python, SQL, Excel, Tableau, and machine learning. Fluent in English and Indonesian.

EDUCATION

University of California San Diego — La Jolla, California, USA
Bachelor of Science in Data Science, Minor in Finance — Expected December 2026

University of California Berkeley Extension — Berkeley, California, USA
Certificate in Data Analytics, Data Analytics Bootcamp — November 2023

SKILLS

AI / LLM: GenAI, Claude API, Prompt Engineering, Agentic Pipelines, RAG, Tool Use / Function Calling, Multi-step LLM Workflows
Languages: Python, SQL, JavaScript, MATLAB, C++
ML / Data: scikit-learn, TensorFlow, PyTorch, pandas, NumPy, SciPy, GeoPandas, PySAL, Matplotlib, Seaborn, Spark
Methods: Hypothesis-Driven Problem Solving, Machine Learning, Deep Learning, NLP, Predictive Modeling, Time-Series Forecasting, Backtesting, A/B Testing, Feature Engineering, ETL, Data Validation, Data Visualization, Business Strategy, Business Transformation
Tools: Tableau, Streamlit, Jupyter, Git, Linux, ROS, AWS, Microsoft 365 (Excel, SharePoint, Teams)
Automation: API Integration (REST), Data Pipeline Automation, Workflow Automation, Automated Testing, Cross-Functional Stakeholder Collaboration

TECHNICAL EXPERIENCE

Triton AI Autonomous Racing (UC San Diego) — San Diego, California
DSC Programmer | ROS 2, Linux, Python, Docker, Autonomous Systems — January 2026 – Present

- Integrated and tested the ROS 2 autonomous go-kart stack on NVIDIA Jetson using Linux and Docker; configured launch workflows and debugged sensor and vehicle-control nodes.
- Resolved recurring sensor and control-node faults across repeated track-test sessions, cutting pre-race integration downtime and contributing to a 2nd-place finish among 9 teams at the 2026 Autonomous Karting Series at Purdue University.

EXPERIENCE

IDX Exchange (Real Estate Data Science Platform) — Remote, USA
Data Scientist Intern — September 2025 – December 2025

- Engineered a client-facing ML pipeline (XGBoost, Random Forest, Linear Regression) integrated via Cotality's Trestle API, achieving R^2=0.89 and ~6% MDAPE across 5+ home-price segments, then translated results into executive decision briefs that shaped pricing strategy.
- Designed a standardized validation workflow across 5+ client experiments (EDA → feature engineering → tuning → evaluation), defining test criteria at each stage to ensure accuracy before delivery, cutting turnaround time 40%.

GAF (Roofing materials distributor, Indonesia — supply chain operations) — Jakarta, Indonesia
Data Scientist Intern — January 2024 – September 2024

- Structured an ambiguous "reduce stock-outs" business question into a measurable forecasting problem; built ARIMA and Decision Tree models on 9 months of procurement data, lifting forecast accuracy 15% and cutting stock-outs 20% for purchasing stakeholders.
- Built and maintained automated data ingestion pipelines feeding Tableau dashboards across 8+ procurement and inventory metrics, eliminating manual reporting errors and saving 3 hrs/week.

STAL Corporation (Printing supplier for Indonesian hospitals and clinics) — Jakarta, Indonesia
Accounting & Data Analyst Intern — June 2023 – August 2023

- Drove a 15% cut in procurement costs by identifying hidden over-ordering patterns through time-series analysis, informing corrective purchasing policy across finance and operations.
- Recovered 4 hrs/week in manual reconciliation time by designing automated Excel-based expense-tracking and budget-planning workflows.

PROJECTS

Menu Engineering Bot | *Python, pandas, Streamlit, Claude API* | github.com/stephaniepatriciaans/menu-engineering-bot

- Built a Streamlit POS analytics app that auto-maps and validates messy sales CSVs, run on 149K+ transactions across 80 items to classify menu items (Stars/Plowhorses/Puzzles/Dogs) and stress-test price changes under base-case and conservative strategies.
- Engineered a leakage-safe backtest (chronological 70/30 split; MAE, RMSE, WAPE) comparing a log-log price-elasticity demand model to a historical-average baseline, verified by 285 automated tests; Claude API writes decision memos from precomputed metrics only, with numerical-claim checks.

Loan Charge Offs | *Python, scikit-learn, TensorFlow* | github.com/stephaniepatriciaans/Project-Loan-Charge-Offs

- Built an ETL pipeline on FRED data (390 rows, 1991–present) and compared 4 ML methods to predict credit-card charge-offs; Random Forest reached 93.91% accuracy, improved to 94.9% with a neural-network model (~6 points over a logistic-regression baseline).

Urban Transit & Crime | *GeoPandas, PySAL, Python* | github.com/stephaniepatriciaans/Urban-Transit-and-Crime

- Led a team of 5 to integrate 1M+ records across 4 public datasets (CTA, MTA, NYPD, CPD) and build spatial regression models (GeoPandas, PySAL, spreg) that detected statistically significant transit-crime clusters across Chicago and NYC.

TrueFork | *Python, scikit-learn, pandas, JavaScript* | github.com/stephaniepatriciaans/TrueFork

- Built and tested an NLP pipeline on 80K+ Food.com review records, validating sentiment classification via A/B testing ($p<0.05$); shipped as a live public site, cutting simulated decision time ~50%.
